

Manual

Genomic Mini AX Tissue Spin

Increased efficiency kit for genomic DNA purification from tissue and cell culture.

catalog # size 056-100S 100 isolations

For research use only.

Guarantee

A&A Biotechnology provides a guarantee on this product.

The company does not guarantee the correct performance of this kit in the event of:

- not adhering to the supplied protocol
- use of not recommended equipment or materials
- use of other reagents than recommended or which are not a component of the product
- use of expired or improperly stored product or its components

Table of Contents

E buffer functionality test	6
Safety information	7

Contents

component	100 isolations	storage
Mini AX Spin columns	100 pcs	2-8 °C
2 ml tubes	200 pcs	15-25 °C
LSU lysis buffer	50 ml	15-25 °C
W1 first wash solution	70 ml	15-25 °C
W2 second wash solution	60 ml	15-25 °C
E elution buffer (without EDTA)	20 ml	2-8 ℃
N neutralizing buffer	1 ml	15-25 °C
T solution	400 µl	2-8 °C
Proteinase K	2 x 1.1 ml	2-8 °C

The binding capacity of the column is 15 $\mu\text{g}.$

Additional equipment and reagents

Necessary

- 1.5 ml sterile Eppendorf tubes
- 1M DTT (cat. # 2010-5, 2010-25, 2010-10P) (for DNA isolation from semen)
- Incubator or thermoblock set to 50 °C
- Vortex
- Microcentrifuge

Optional

• RNAse (cat. # 1006-10, 1006-50)

Important information

• E elution buffer loses activity upon prolonged contact with air. Always close the E elution buffer vial tightly directly after use. Store E elution buffer at 2-8 °C.

Material preparation

Solid tissue

- 1. Transfer up to 20 mg of fragmented tissue to a 1.5 ml Eppendorf tube (not included).
- 2. Follow point 1. of the isolation protocol.

Cell culture

- 1. Transfer 1 x 10⁶ of cell culture to a 1.5 ml Eppendorf tube (not included). Centrifuge and discard supernatant.
- 2. Follow point 1. of the isolation protocol.

Semen

- 1. Transfer 100 µl of semen to a 1.5 ml Eppendor tube (not included).
- 2. Add 20 µl of 1M DTT (not included).
- 3. Follow point 1. of the isolation protocol.

Isolation protocol

 Add 400 µl of LSU lysis buffer and 20 µl of proteinase K.
Vortex the sample and incubate at 50 °C: cell culture and semen: 10 min; solid sample: 1-2 h until complete digestion.
Vortex the sample a few times The incubation step can be performed in Eppendorf Thermomixer or analogous equipment at 1400 RPM and 50 °C. RNA digestion (optional): add 5 µl of RNAse (10 mg/ml solution) (not included). Mix and incubate for 5 min at room temp.
Intensively vortex the sample for 2 min at 1000-1400 RPM. This is the key step for efficiency of DNA isolation.

4.	Centrifuge for 5 min at 8 000 x g.
	The DNA pellet should be visible at the bottom of the tube.
5.	Apply the supernatant onto the Mini AX Spin column placed inside a 2 ml tube.
6.	Centrifuge for 30-60 s at 8 000 x g .
7.	Transfer the Mini AX Spin column to a new 2 ml tube (included).
8.	Add 600 μl of W1 first wash solution. Centrifuge for 30-60 s at 8 000 x g .
9.	Transfer the Mini AX Spin column to a new 2 ml tube (included).
10.	Add 500 μl of W2 second wash solution. Centrifuge for 30-60 s at 14 000-21 000 x g .
11.	Prepare a 1.5 ml elution tube (not included) and add 5 μl of N neutralizing buffer. DNA neutralization - page 6.
12.	Transfer the Mini AX Spin column to the prepared elution tube.
13.	Before using E buffer, it is recommended to do a functionality test - page 6.
	Apply 100-150 µl of E elution buffer onto the Mini AX Spin column. Keep for 2 min at room temp.
	E elution buffer loses activity upon prolonged contact with air. Always close the E elution buffer vial tightly directly after use. Store E elution buffer at 2-8 °C.
14.	Centrifuge for 30-60 s at 14 000-21 000 x g .
15.	Remove the Mini AX Spin column. Close the tube with purified DNA.

DNA neutralization

E elution buffer is strongly alkaline and may cause DNA degradation upon freezing. Thus it is necessary to use a N neutralizing buffer. We recommend adding the N neutralizing buffer to the elution tube before the elution step. If the N neutralizing buffer was not added before the elution step it can be added directly before freezing DNA samples. The use of N neutralizing buffer enables secure DNA storage conditions at 10 mM TrisHCl, pH 8.5.

E buffer functionality test

E buffer has a critical influence on DNA elution efficiency and thus overall DNA purification yield. The kit contains T solution which enables testing of the E buffer correct functionality.

Typically it is suggested to perform such a test in the following cases:

- E buffer was not used for a long period of time (at least 2 months).
- E buffer was stored at room temp. for a long period of time (at least 2 weeks).
- E buffer vial was not closed tightly.

Procedure:

Transfer 20 μI of E buffer to PCR tubes; add 2 μI of T solution; mix the sample, wait 2 min. Compare the mixture color with the reference color guide.

Safety information

	Proteinase K	
	H315 Causes skin irritation. H319 Causes serious eye irritation. H334 May cause allergy or asthma symptoms or breathing difficulties if inhaled. H335 May cause respiratory irritation. P261 Avoid breathing dust. P305+P351+P338 If in eyes: rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. P342+P311 If experiencing respiratory symptoms call a Poison Center or doctor/physician.	
~	LSU lysis buffer	
WARNING	H302 Harmful if swallowed. H315 Causes skin irritation. H319 Causes serious eye irritation. P305+P351+P338 If in eyes: rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing.	
	W1 first wash solution	
DANGER	H225 Highly flammable liquid and vapor. H319 Causes serious eye irritation. H336 May cause drowsiness or dizziness. P210 Keep away from heat, sparks, open flames, hot surfaces. No smoking. P261 Avoid breathing vapors. P305+P351+P338 If in eyes: rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing.	
\wedge	E elution buffer	
DANGER	H314 Causes severe skin burns and eye damage. P280 Wear protective gloves/ protective clothing/ eye protection/ face protection. P305+P351+P338 If in eyes: rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. P310 Immediately call a Poison Center or doctor/physician.
